

The TP Hide

Assembly/Disassembly Instructions

Assembly

The TP is incredibly easy to erect. Once removed from the bag it will spring into shape due to its sprung steel construction.

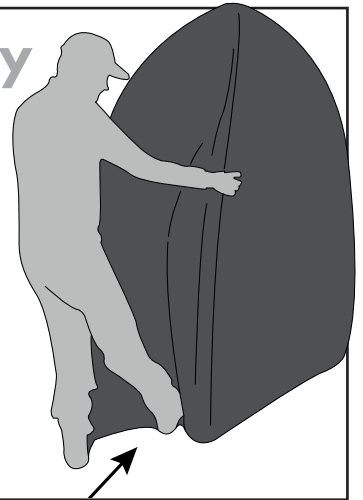

Please be aware that the hide is under tension and can spring into shape at speed.

Disassembly

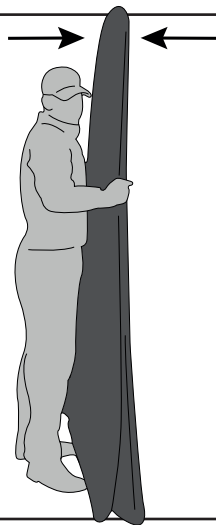

1

The first step in taking down the TP is to move the excess material into the middle of the hide and pull the sides together.

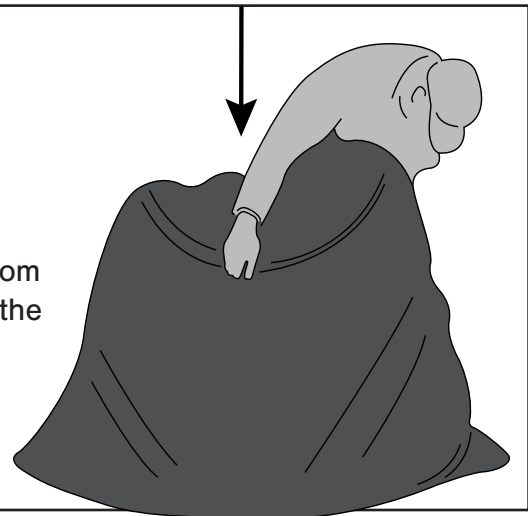

2

Make the TP into a flat shape by holding both sides.

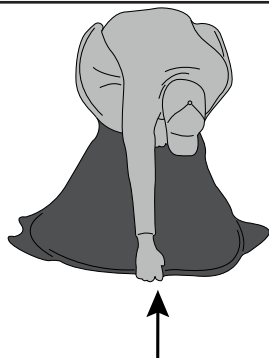

3

Fold the Hide From the top down to the centre line.

4

Then bring the bottom up to the top.

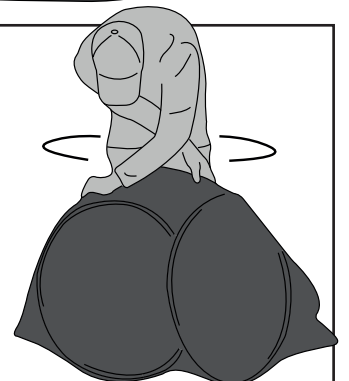

5

The hide will begin to fold in on itself. At this point, turn the hide around.

Please note that force is *not* required and you must take care to *not* twist the metal.

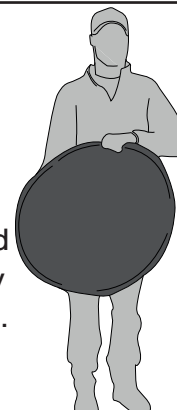

6

Gather up the folded sections of the TP and any excess material.

7

Pick up the folded TP and it is ready to put into its bag.

Dimensions & Weight

Height: 200cm
Width: 140cm
Depth: 100cm
Weight: 4.5kg
